

INSTRUCTIONS

WALL STICKERS

Material

The wall stickers from Studio Ditte are cut from a high quality matte vinyl. Vinyl is a strong and water proof material. Because it is very thin material, there is almost no height difference visible. You can apply this material on a hard and smooth surface as a stucco wall, a wooden base, on smooth wallpaper (no fiberglass wallpaper), on doors and windows.

Surface

The surface on which the wall stickers will be applied must be smooth, clean (free from dust and grease) and dry. Damp walls are not suitable for sticking. Newly painted walls should be well dried so that the moisture is out of the wall and the wall is cured. This may take at least three weeks. On a wall with dirt-repellent paint or lime paint the sticker will not paste properly. Studio Ditte is not responsible if the sticker does not stick. Note; a dark surface may shine through.

Paste

The stickers are easy to apply on the surface. You can pick the stickers on the backing paper and apply it directly on the surface. The wall stickers are not re-usable. They can be easily removed, if needed by using a hair dryer. Studio Ditte is in no way responsible for any damage to walls or other items after, or resulting from, the application or removal of the wall stickers.

We wish you much fun with the wall stickers from Studio Ditte.
